**ALBERTA**

**LINEAR PROPERTY ASSESSMENT**

**MINISTER'S GUIDELINES**

ALBERTA  
MUNICIPAL AFFAIRS

Office of the Minister  
MLA, Leduc-Beaumont

MINISTERIAL ORDER NO. MAG:020/18

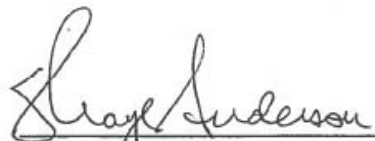

I, Shaye Anderson, Minister of Municipal Affairs, pursuant to Section 322 and 322.1 of the *Municipal Government Act* and the applicable regulations, make the following order:

- The 2018 Alberta Farm Land Assessment Minister's Guidelines,
- The 2018 Alberta Linear Property Assessment Minister's Guidelines,
- The 2018 Alberta Machinery and Equipment Assessment Minister's Guidelines,
- The 2018 Alberta Railway Assessment Minister's Guidelines, and
- The 2005 Alberta Construction Cost Reporting Guide

as set out in the attached documents, are established and become effective for the 2018 assessment year for taxation in 2019 and subsequent years.

This Ministerial Order rescinds Ministerial Order No. MAG:021/17 as of December 31, 2018.

Dated at Edmonton, Alberta, this 13<sup>th</sup> day of December 2018.

  
Shaye Anderson  
Minister of Municipal Affairs

## 1.000 APPLICATION

Pursuant to section 11 of the Regulation, the Provincial Assessor designated by the Minister must follow the procedures set out in the *2018 Alberta Linear Property Assessment Minister's Guidelines*.

### 1.001 DEFINITIONS

In the *2018 Alberta Linear Property Assessment Minister's Guidelines*

- (a) **Act** means the *Municipal Government Act* (RSA 2000 Ch. M-26);
- (b) **AER** means the Alberta Energy Regulator;
- (c) **AER Debtor Registry** means the list created by the AER under section 103 of the Oil and Gas Conservation Act;
- (d) **AER Insolvency List** means the list provided by the AER;
- (e) **assessment classification code (ACC)** means the components of linear property as determined by the *2018 Alberta Linear Property Assessment Minister's Guidelines*;
- (f) **assessment year** has the meaning given to it in the regulation;
- (g) **assessment year modifier (AYM)** means the factor that adjusts the base cost of the linear property to the assessment year cost;
- (h) **assessor** has the meaning given to it in the *Act*;
- (i) **AUC** means the Alberta Utilities Commission;
- (j) **base cost** means the value resulting from the formula shown in Schedule A of the *2018 Alberta Linear Property Assessment Minister's Guidelines*;
- (k) **Construction Cost Reporting Guide (CCRG)** refers to the 2005 Alberta Construction Cost Reporting Guide;
- (l) **cost factor (cf)** means the factor that adjusts included cost (ic) from the year built to the base cost;
- (m) **depreciation** is the Schedule C factor as determined from the *2018 Alberta Linear Property Assessment Minister's Guidelines*;
- (n) **additional depreciation** is the Schedule D factor as determined from the *2018 Alberta Linear Property Assessment Minister's Guidelines*;
- (o) **electric power systems** has the meaning given to it in the *Act* section 284(1)(k)(i) ;
- (p) **ERCB** means the Energy Resources Conservation Board;
- (q) **EUB** means the Alberta Energy and Utilities Board;
- (r) **included cost (ic)** means the value of linear property calculated in accordance with the 2005 *Construction Cost Reporting Guide*, prior to adjustment by the **cost factor**;
- (s) **linear property** has the meaning given to it in the *Act* section 284(1)(k);
- (t) **Minister** has the meaning given to it in the *Act*;
- (u) **municipality** has the meaning given to it in the *Act*;
- (v) **NEB** means the National Energy Board;
- (w) **Off-Coal Agreement** means an arrangement of transition payments from the Government of Alberta and owners of coal-fired units that were originally slated to operate beyond 2030 to discontinue using coal as a fuel source by December 31, 2030.
- (x) **Operational** has the meaning given to it in the *Act* section 284(1)(o.1);
- (y) **operator** has the meaning given to it in the *Act* section 284(1)(p);
- (z) **pipelines** has the meaning given to it in the *Act* section 284(1)(k)(iv);
- (aa) **Regulation** means the Matters Relating to Assessment and Taxation Regulation (AR 220/2004), or the Matters Relating to Assessment and Taxation Regulation, 2018 (AR 203/2017), whichever is applicable in the context;
- (bb) **request for information (RFI)** means the report referred to in section 292, and the information requested by the assessor pursuant to sections 294 and 295 of the *Act*;
- (cc) **streetlighting systems** has the meaning given to it in the *Act* section 284(1)(k)(ii);
- (dd) **supplementary assessment** has the meaning given to it in the *Act* section 314.1;
- (ee) **telecommunications systems** has the meaning given to it in the *Act* section 284(1)(k)(iii);
- (ff) **wells** has the meaning given to it in the *Act* section 284(1)(k)(vi);

(gg) **year built** is the year in which the linear property meets the conditions in section 291(2)(a) of the Act.

**NOTE:** For all parts of Alberta, other than the City of Lloydminster, the regulation sections referenced within this guideline come from the Matters Relating to Assessment and Taxation Regulation, 2018 (AR 203/2017). For the City of Lloydminster, refer to the appropriate sections in the Matters Relating to Assessment and Taxation Regulation (AR 220/2004).

### 1.002 PROCESS FOR CALCULATING LINEAR PROPERTY ASSESSMENTS

- (a) Pursuant to section 11(2) of the Regulation, the process for calculating electric power systems linear property assessments is found in section 2.000 of the *2018 Alberta Linear Property Assessment Minister's Guidelines*.
- (b) Pursuant to section 11(2) of the Regulation, the process for calculating telecommunications systems linear property assessments is found in section 3.000 of the *2018 Alberta Linear Property Assessment Minister's Guidelines*.
- (c) Pursuant to section 11(2) of the Regulation, the process for calculating pipeline and well linear property assessments is found in section 4.000 of the *2018 Alberta Linear Property Assessment Minister's Guidelines*.

### 1.003 DESCRIPTION OF THE SCHEDULES

- (a) **Schedule A**—provides the process for determining base cost. Schedule A values are rounded to the nearest \$1 and have a minimum base cost of \$1.
- (b) **Schedule B**—lists the assessment year modifiers. Schedule B factors are specified to three significant digits.
- (c) **Schedule C**—provides the process for determining depreciation or lists the depreciation factor allowed by the *2018 Alberta Linear Property Assessment Minister's Guidelines*. Schedule C factors are specified to three significant digits. **The depreciation factors prescribed in Schedule C are fixed and certain and must be applied as listed in the applicable Schedule C depreciation table, without adjustment or modification.**
- (d) **Schedule D**—provides the process for determining additional depreciation or lists the additional depreciation factor allowed by the *2018 Alberta Linear Property Assessment Minister's Guidelines*. Schedule D factors are specified to three significant digits. **The additional depreciation factor for linear property described in Schedule D is exhaustive. No additional depreciation is allowed.** There will be no recognition or adjustment in Schedule C or Schedule D as a result of the cessation or reduction of coal-fired emissions on or before December 31, 2030 arising from an Off-Coal Agreement or Provincial or Federal legislation.
- (e) **Schedule E\*\*** – provides the process for determining the supplementary adjustment.
- (f) **Schedule L** – provides the process for determining the land assessment. Schedule L values are rounded to the nearest \$1.

### 1.004 ROUNDING

The final assessment for linear property is rounded to the nearest \$10 except for a linear assessment value of \$0\*.

### 1.005 MINISTERIAL PRESCRIPTION

For the purposes of these Guidelines, it is hereby prescribed that the cost of all computer software, including both basic software and applications software, intended for or used in connection with the monitoring, control or operation of any linear property shall be included in the base cost of the property.

\* Applicable only where a Company or Assessed Person is listed on the AER Debtor Registry or AER Insolvency List with a Receivership or Bankruptcy status, and the linear property meets the criteria listed in Table 4.04,4.10,4.11,4.12,or 4.13.

\*\* Schedule E is only applicable for supplementary assessments.

**TABLE 1.01 ASSESSMENT YEAR MODIFIERS (AYM)**

**1.006 SUPPLEMENTARY ASSESSMENT**

Section 314.1 of the *Municipal Government Act (MGA)* enables the provincial assessor to prepare supplementary assessments for new designated industrial property. The supplementary assessment must be prorated to reflect the number of months during which the property is operational. The whole of the first month must be included.

The supplementary assessment is determined by multiplying the values calculated for Schedules A, B, C & D for the applicable linear property, and multiplying by the Schedule E factor. Supplementary assessments do not include land.

The Schedule E factor is determined using Table 1.02.

**TABLE 1.02 SCHEDULE E\*\* FACTORS**

| <b>Month became operational</b> | <b>Months operational in the year (A)</b> | <b>Total months in the year (B)</b> | <b>Schedule E Factor (A/B)</b> |
|---------------------------------|---|-------------------------------------|--------------------------------|
| November                        | 12  | 12                                  | 1.000                          |
| December                        | 11  | 12                                  | 0.917                          |
| January                         | 10  | 12                                  | 0.833                          |
| February                        | 9   | 12                                  | 0.750                          |
| March                           | 8   | 12                                  | 0.667                          |
| April                           | 7   | 12                                  | 0.583                          |
| May                             | 6   | 12                                  | 0.500                          |

Table 1.02 SCHEDULE E FACTORS (CONT'D)

|           |   |    |       |
|-----------|---|----|-------|
| June      | 5 | 12 | 0.417 |
| July      | 4 | 12 | 0.333 |
| August    | 3 | 12 | 0.250 |
| September | 2 | 12 | 0.167 |
| October   | 1 | 12 | 0.083 |

\*\* Schedule E is only applicable for supplementary assessments.

## 2.000 ELECTRIC POWER SYSTEMS

### 2.001 DEFINITIONS

In section 2.000, the following definitions apply:

- (a) **chronological age** is the assessment year minus the year built or the assessment year minus the effective year built.
- (b) **effective year built** refers to the estimated vintage of generation plant and substation components (and no other property types), based on their present condition, design features and engineering factors.
- (c) **urban** refers to a City, Town, Village and Summer Village as defined in the *Municipal Government Act* and the Sherwood Park Urban Service Area; the Fort McMurray Urban Service Area; Lac La Biche County Urban Service Area, and the Municipality of Jasper.
- (d) **rural** refers to all other jurisdictions not referred to in (c).

### 2.002 DESCRIPTION OF THE RATES FOR ASSESSMENT CLASSIFICATION CODES (ACCS) FOUND IN TABLE 2.01

- (a) The rates for Assessment Classification Codes (ACCs) beginning with EDS are comprised of all included costs of components necessary for the distribution of electric power.
- (b) The Assessment Year Modifier (AYM) referred to in Table 2.01 is found in Table 1.01.
- (c) The rates for ESL are comprised of all included costs of components necessary for a typical street lighting service.
- (d) The rates for ACCs beginning with EFS are comprised of all included costs of components necessary for a typical oil and gas field service.
- (e) The rates for ACCs beginning with ET are comprised of all included costs of components necessary for the transmission of electric power.
- (f) The rates for ACCs ET80 and ET90 include the cost of ducting and manholes to protect the linear property.

**2.003 DEPRECIATION (SCHEDULE C AND SCHEDULE D) FOR ACCS BEGINNING WITH GEN**

- (a) The Schedule C depreciation tables for ACCs beginning with GEN reflect all physical, all functional, all economic and net salvage considerations. The factor within the Schedule C depreciation tables are fixed and certain, and shall be applied as listed in the applicable Schedule C depreciation table, without adjustment or modification.
- (b) Schedule D depreciation for ACCs beginning with GEN is limited to highly unusual site-specific circumstances such as catastrophic physical failure, and is only allowed on a case by case basis when acceptable evidence is documented and provided to the assessor.
- (c) The combined effect of Schedule C and Schedule D for ACCs beginning with GEN shall not exceed total depreciation of 80%. Accordingly, if a depreciation factor of 0.200 is achieved under Schedule C, no additional depreciation is allowed under Schedule D. There will be no recognition or adjustment in Schedule C or Schedule D as a result of the cessation or reduction of coal-fired emissions on or before December 31, 2030 arising from an Off-Coal Agreement or Provincial or Federal legislation.

**2.004 PROCESS FOR CALCULATING THE ASSESSMENT OF LINEAR PROPERTY ELECTRIC POWER SYSTEMS**

The assessment of linear property electric power systems is calculated by using the following process:

- (a) Locate the ACC determined from section 2.004 in Table 2.01.
- (b) Calculate the base cost using the prescribed Schedule A formula, rounded to the nearest \$1. The minimum base cost is \$1.
- (c) Determine the Schedule B factor using the prescribed value in Table 1.01 as referred to in Table 2.01.
- (d) Determine the Schedule C factor using the prescribed value in Table 2.01A or 2.01B as referred to in Table 2.01.
- (e) Subject to section 1.003(d) and section 2.003(b), the assessor may allow additional depreciation (Schedule D) on a case-by-case basis and only if the operator provides acceptable evidence to the assessor.
- (f) Calculate the assessment of linear property by multiplying together the values of Schedules A, B, C, and D. The final assessment is rounded to the nearest \$10. The minimum assessment for linear property is \$10.

**TABLE 2.01 CALCULATION PROCESS FOR ELECTRIC POWER SYSTEMS ACCS**

Notes:

- (a) All cost factors (cf) referred to in Table 2.01 are found in Table 2.02 using year built.
- (b) For ACCs beginning with EDS,  $n^*$  equals the quantity of customer hookups as of October 31 of the assessment year.
- (c) For ACCs beginning with ESL10,  $n^*$  equals the number of street lighting poles with one or more davits as of October 31 of the assessment year. Street light poles with more than one davit must report the additional davits as ESL20.
- (d) For ACCs beginning with ESL20,  $n^*$  equals the number of davits not reported as ESL10 as of October 31 of the assessment year.
- (e) For ACCs beginning with EFS,  $n^*$  equals the quantity of customer hookups as of October 31 of the assessment year.
- (f) For ACCs beginning with ET,  $n^*$  equals the length in metres.
- (g) For ACC EDS12 the Schedule D depreciation factor is 0.116.
- (h) For ACC EDS13 the Schedule D depreciation factor is 0.486.
- (i) \*\*For the ACC SST10 and ACCs beginning with GEN, the assessor may allow additional depreciation (Schedule D) only on a case-by-case basis and only if the operator provides acceptable evidence.
- (j) For all other ACCs for electric power systems Schedule D depreciation is 1.000.

### **3.000 TELECOMMUNICATIONS SYSTEMS**

#### **3.001 DEFINITIONS**

No additional definitions are required for section 3.000.

#### **3.002 DESCRIPTION OF THE RATES FOR ACCS FOUND IN TABLE 3.01**

- (a) ACCs beginning with RT include all costs for antenna supporting towers, their foundations, grounding, including the antenna mount, ice guards, and support hardware, but exclude antennas and wave guides. The costs of all types of towers, poles, masts, or other structures that support radio antennas are also included.
- (b) The Assessment Year Modifier (AYM) referred to in Table 3.01 or Table 3.04 is found in Table 1.01.
- (c) ACC POPS includes all construction costs for a point of presence without standby power that serves one customer or a single multi-tenant building.
- (d) ACC POPM includes all construction costs for a point of presence with standby power that serves larger installations where more than one building is connected or for the connection of residential service whose included cost is less than \$100,000 in the year built.
- (e) ACC POPO includes all construction costs for all other point of presence sites whose included cost exceeds \$100,000 in the year built.

#### **3.003 ADDITIONAL DEPRECIATION (SCHEDULE D) FOR ACCS BEGINNING WITH COAX, FIBRC, FIBRT1, FIBRT2, FIBRT3, HKUP, COPR AND DROP**

- (a) For cable distribution undertakings with ACCs beginning with COAX, FIBRC, and HKUP the assessor shall adjust for additional depreciation (Schedule D) by applying the formula and factors found in Table 3.03.
- (b) For telecommunication carriers with ACCs beginning with COPR, DROP, and FIBRT the assessor shall adjust for additional depreciation (Schedule D) by applying the formula and factors found in Table 3.06.
- (c) The depreciation factors prescribed in Schedule D for linear property are exhaustive. No additional depreciation is allowed.

#### **3.004 PROCESS FOR CALCULATING THE ASSESSMENT OF LINEAR PROPERTY TELECOMMUNICATIONS SYSTEMS**

The assessment of linear property telecommunications systems is calculated by using the following process:

- (a) Locate the ACC determined from section 3.004 in Table 3.01 or Table 3.04.
- (b) Calculate the base cost using the prescribed Schedule A formula, rounded to the nearest \$1. The minimum base cost is \$1.
- (c) Determine the Schedule B factor using the prescribed value in Table 1.01 as referred to in Table 3.01 or Table 3.04.
- (d) Determine the Schedule C factor using the prescribed value in Table 3.01A or Table 3.04A as referred to in table 3.01 or table 3.04. The depreciation factors prescribed in Schedule C for linear property are exhaustive except as specified in Schedule D.
- (e) Determine the Schedule D factor using the prescribed values in Table 3.01 or Table 3.04. The depreciation factors prescribed in Schedule D for linear property are exhaustive. No additional depreciation is allowed.
  - (i) for ACCs starting with HKUP, COAX, COPR and DROP the utilization percentage is the number of actual customer hook-ups divided by potential customer hook-ups times 100.

3.004 CONT.

- ii) for ACCs starting with FIBRC, FIBRT1, FIBRT2, AND FIBRT3, the utilization percentage is the number of lit strands divided by owned strands times 100.
- (f) Calculate the assessment of linear property by multiplying together the values of Schedules A, B, C, and D. The final assessment is rounded to the nearest \$10. The minimum assessment for linear property is \$10.

**TABLE 3.01 CALCULATION PROCESS FOR CABLE DISTRIBUTION UNDERTAKINGS ACCS**

Notes:

- (a) All cost factors referred to in Table 3.01 are found in Table 3.02.

| ACC           | Characteristics and Specifications   | Schedule              |            |             |            |            |

| 1940       | 12.33            | 1978       | 1.84             | 2016       | 0.88             |
| 1941       | 11.25            | 1979       | 1.62             | 2017       | 0.87             |
| 1942       | 10.30            | 1980       | 1.44             | 2018       | 0.87             |
| 1943       | 10.07            | 1981       | 1.28             |            |                  |
| 1944       | 10.01            | 1982       | 1.20             |            |                  |
| 1945       | 9.93             | 1983       | 1.19             |            |                  |
| 1946       | 9.21             | 1984       | 1.12             |            |                  |
| 1947       | 8.56             | 1985       | 1.08             |            |                  |
| 1948       | 8.19             | 1986       | 1.07             |            |                  |
| 1949       | 8.20             | 1987       | 1.03             |            |                  |
| 1950       | 7.97             | 1988       | 1.03             |            |                  |

**TABLE 3.06 SCHEDULE D FACTORS FOR TELECOMMUNICATION CARRIERS WITH ACCS BEGINNING WITH COPR, FIBRT, AND DROP IN TABLE 3.04**

| Utilization Percentage | Schedule D Factor |
|------------------------|-------------------|
| 80 and above           | 1.00              |
| 75 to 79.99            | 0.95              |
| 70 to 74.99            | 0.90              |
| 65 to 69.99            | 0.85              |
| 60 to 64.99            | 0.80              |
| 55 to 59.99            | 0.75              |
| 50 to 54.99            | 0.70              |
| 45 to 49.99            | 0.65              |
| 40 to 44.99            | 0.60              |
| 35 to 39.99            | 0.55              |
| Under 35               | 0.50              |

**4.000 PIPELINES AND WELLS****4.001 DEFINITIONS**

No additional definitions are required for section 4.000.

**4.002 CHARACTERISTICS AND SPECIFICATIONS**

- (a) For linear property defined in section 284(1)(k)(iv) of the *Act* and section 2(1)(i) of the *Regulation* where that linear property is licensed by the AER and the linear property is contained in the records of the AER, the assessment must reflect the characteristics and specifications contained in the records of the AER as of October 31 of the assessment year.
- (b) For linear property defined in section 284(1)(k)(iv) of the *Act* and section 2(1)(i) of the *Regulation* where that linear property is not licensed by the AER or the linear property is not contained in the records of the AER, the assessment must reflect the characteristics and specifications contained in the RFI as of October 31 of the assessment year.
- (c) For linear property defined in section 284(1)(k)(vi) of the *Act* and section 2(1)(m) of the *Regulation* the assessment must reflect the characteristics and specifications contained in the records of the AER as of October 31 of the assessment year.
- (d) For linear property defined in section 284(1)(k)(vi) of the *Act* and section 2(1)(m) of the *Regulation* located within the municipal boundary of the City of Lloydminster, Saskatchewan, the assessment must reflect the characteristics and specifications contained in the RFI as of October 31 of the assessment year.
- (e) For linear property described in 4.002(a), the following sections apply:
  - (i) 4.003(a)
  - (ii) 4.006
  - (iii) 4.010(a)
  - (iv) 4.011(a)
  - (v) 4.012
- (f) For linear property described in 4.002(b), the following sections apply:
  - (i) 4.003(b)
  - (ii) 4.007
  - (iii) 4.013
- (g) For linear property described in 4.002(c) or 4.002(d), the following sections apply:
  - (i) 4.003(c)
  - (ii) 4.004
  - (iii) 4.005
  - (iv) 4.008
  - (v) 4.009
  - (vi) 4.010(b)
  - (vii) 4.011(b)
  - (viii) 4.014

**4.003 CHARACTERISTICS AND SPECIFICATIONS USED TO DETERMINE THE ACC OF LINEAR PROPERTY PIPELINES AND WELLS**

- (a) For linear property described in 4.002(a), the ACC is determined based on the combination of the following characteristics and specifications:
  - (i) pipeline material (see Table 4.01),
  - (ii) outside diameter, and
  - (iii) the maximum operating pressure,as contained in the records of the AER. (see Table 4.02)
  
- (b) For linear property described in 4.002(b), the ACC is determined based on the combination of the following characteristics and specifications:
  - (i) pipeline material (see Table 4.01),
  - (ii) outside diameter, andthe maximum operating pressure, as contained in the RFI.
  
- (c) For linear property described in 4.002(c) or 4.002(d), the ACC is determined based on the combination of the following characteristics and specifications:
  - (i) pool code,
  - (ii) well status fluid,
  - (iii) well status mode,
  - (iv) well status type,
  - (v) well status structure,
  - (vi) monthly oil (includes bitumen),
  - (vii) monthly gas
  - (viii) monthly condensate volumes, and
  - (ix) surface hole locationas contained in the records of the AER or the RFI.

**4.004 PROCESS FOR DETERMINING THE MINISTER'S GUIDELINES WELL STATUS OF LINEAR PROPERTY DESCRIBED IN 4.002(C) OR 4.002(D)**

The Minister's Guidelines well status of linear property wells described in 4.002(c) or 4.002(d) is determined by combining the latest well status fluid, well status mode, well status type and well status structure as contained in the records of the AER or the RFI as shown in Table 4.05.

**4.005 PROCESS FOR DETERMINING THE MINISTER'S GUIDELINES WELL STATUS DESCRIPTION OF LINEAR PROPERTY DESCRIBED IN 4.002(C) OR 4.002(D)**

The process for determining Minister's Guidelines well status description for each AER well status identified for linear property described in 4.002(c) or 4.002(d) is as follows:

- (1) Locate each AER well status in column 1 of Table 4.05.
- (2) Determine the sum of oil and condensate production in the 12 months ending October 31 of the assessment year. If production is greater than zero (0), then the Minister's Guidelines well status description is found in column 2 of Table 4.05 and proceed to 4.005(5). If production is equal to zero (0), then proceed to 4.005(3).
- (3) Determine the total gas production in the 12 months ending October 31 of the assessment year. If production is greater than zero (0), then the Minister's Guidelines well status description is found in column 3 of Table 4.05 and proceed to 4.005(5). If production is equal to zero (0), proceed to 4.005(4).
- (4) For all remaining linear property described in 4.002(c) or 4.002(d) the Minister's Guidelines well status description is found in column 4 of Table 4.05.
- (5) For "Gas" and "Drilled and Cased" Minister's Guidelines well status descriptions, if the first four characters of the AER pool code are 0158, then the Minister's Guidelines well status description is found in Table 4.06.

**4.006 PROCESS FOR DETERMINING THE ACC OF LINEAR PROPERTY DESCRIBED IN 4.002(A) OR 4.002(B) AND 4.003(A) OR 4.003(B)**

The process for determining the ACC for linear property described in 4.002(a) or 4.002(b) and 4.003(a) or 4.003(b) is as follows:

- (1) Locate the material code contained in the records of the AER or the RFI in column 2 of Table 4.01. The Minister's Guidelines Pipe Material is found in column 4 of Table 4.01. If the reported material code cannot be found in column 2 of table 4.01 then the Minister's Guidelines Pipe Material is defaulted to 'S'.
- (2) If the Minister's Guidelines Pipe Material is "S" and the maximum operating pressure is:
  - (A) Greater than or equal to zero (0), then locate the pressure range in column 1 of Table 4.02 that contains the maximum operating pressure as contained in the records of the AER or the RFI. The Minister's Guidelines Pressure Code is found in column 2 of Table 4.02,
  - (B) Not reported, then the Minister's Guidelines Pressure Code is P900.
- (3) If the Minister's Guidelines Pipe Material is P, V, A, or F then locate the pipe material in column 1 of Table 4.02A. The ACC is found in column 2 of Table 4.02A.
- (4) If the Minister's Guidelines Pipe Material is S and the pressure code is P150, P300, P400, then locate the pressure code in column 1 of Table 4.02B. The ACC is found in column 2 of Table 4.02B.
- (5) If the Minister's Guidelines Pipe Material is S and the pressure code is P600, then locate the outside diameter in the ranges specified in column 1 of Table 4.02C. The ACC is found in column 2 of Table 4.02C.
- (6) If the Minister's Guidelines Pipe Material is S and the pressure code is P900, then locate the outside diameter in the ranges specified in column 1 of Table 4.02D. The ACC is found in column 2 of Table 4.02D.

**4.007 PROCESS FOR DETERMINING THE N\* OF LINEAR PROPERTY DESCRIBED IN 4.002(A) AND 4.002(B)**

- (1) For linear property described in 4.002(a)  $n^*$  equals the licensed length as contained in the record of the AER.
- (2) For linear property described in 4.002(b)  $n^*$  equals the quantity reported in kilometres (km) in the RFI.

**4.008 PROCESS FOR DETERMINING THE ACC OF LINEAR PROPERTY DESCRIBED IN 4.002(C) OR 4.002(D)**

- (a) Determine how many AER well statuses the linear property has.
- (b) If the linear property has:
  - (i) exactly one AER well status, locate the Minister's Guidelines well status description determined in 4.005 on Table 4.07 to determine the ACC,
  - (ii) more than one AER well status description, use Table 4.08. From the Minister's Guidelines well status descriptions of the linear property determined in 4.005, identify the Minister's Guidelines well status description that occurs first in Table 4.08 to determine the ACC.
- (c) If after the process outlined in 4.008(a) and (b), the linear property has an ACC of WL50 (Crude Bitumen) then count the number of linear property surface holes located within the same LSD, section, township, range and meridian that have an ACC of WL50,
  - (i) If the count is greater than or equal to ten, then the ACC for each of the wells is WL60 (Crude Bitumen High Density).
  - (ii) If the count is less than ten, then the ACC for each of the wells remains WL50.

**4.009 PROCESS FOR DETERMINING  $n^*$  IN TABLE 4.09 FOR LINEAR PROPERTY DESCRIBED IN 4.002(C)**

The process for determining  $n^*$  for linear property described in 4.002(c) is as follows:

- (1) For each AER well status determine the least of:
  - (A) Total depth (field WELL-TOTAL-DEPTH of AER General Well File record type 010)
  - (B) Deepest shoe set depth (field SHOE-SET-DEPTH of AER General Well File record type 040)

as contained in the records of the AER for the AER well statuses identified in 4.009(1) where the depth does not equal zero (0). If the shoe set depth, total depth and plug depth are all zero (0), then  $n^*$  equals zero (0).
- (2) For each AER well status determine the least of:
  - (A) The top of all cement plugs (field INTRVL-TOP of AER General Well File record type 055 where field PACKER-IND is 1 and field PT-CODE is 51)
  - (B) The top of all bridge plugs with cement (field INTRVL-TOP of AER General Well File record type 055 where field PACKER-IND is 1 and field PT-CODE is 53)
  - (C) The top of all bridge plugs without cement (field INTRVL-TOP of AER General Well File record type 055 where field PACKER-IND is 1 and field PT-CODE is 55)
  - (D) The top of all hydromite bridge plugs (field INTRVL-TOP of AER General Well File record type 055 where field PACKER-IND is 1 and field PT-CODE is 57)
  - (E) The top of all bridge plugs without cement (field INTRVL-TOP of ERCB General Well File record type 055 where field PACKER-IND is 2 and field PT-CODE is 2).

as contained in the records of the AER for the AER well statuses identified in 4.009(1) where the depth does not equal zero (0).

If the AER well status has no cement plugs or bridge plugs (with or without cement) then the depth for 4.009(2) is zero (0).

- (3) For each AER well status determine the AER well status depth. If the depth determined in 4.009(2) for the well status is:
  - (A) Equal to zero (0) then the AER well status depth is the depth determined in 4.009(1).
  - (B) Greater than zero (0) then the AER well status depth is:

$$\text{Depth}_{4.009(2)} + ((\text{Depth}_{4.009(1)} - \text{Depth}_{4.009(2)}) * 0.100)$$

- (4)  $n^*$  for the linear property is the largest of the AER well status depths determined in 4.009(3).

**4.009A PROCESS FOR DETERMINING  $n^*$  IN TABLE 4.09 FOR LINEAR PROPERTY DESCRIBED IN 4.002(D)**

The process for determining  $n^*$  for linear property described in 4.002(d) is as follows:

- (1) For each RFI well status determine the least of:
  - (A) Total depth
  - (B) Deepest shoe set depth
  - (C) Plug back depth

as contained in the RFI for the well statuses identified in 4.009(1) where the depth does not equal zero (0). If the shoe set depth, total depth and plug depth are all zero (0), then

$n^*$  equals zero (0).

- (2) For each RFI well status determine the least of:
- (A) The top of all cement plugs
  - (B) The top of all bridge plugs with cement
  - (C) The top of all bridge plugs without cement
  - (D) The top of all hydromite bridge plugs

as contained in the RFI for the well statuses identified in 4.009(1) where the depth does not equal zero (0).

If the RFI well status has no cement plugs or bridge plugs (with or without cement) then the depth for 4.009A(2) is zero (0).

- (3) For each RFI well status determine the RFI well status depth. If the depth determined in 4.009A(2) for the RFI well status is:
- (A) Equal to zero (0) then the RFI well status depth is the depth determined in 4.009A(1).
  - (B) Greater than zero (0) then the RFI well status depth is:

$$\text{Depth}_{4.009A(2)} + ((\text{Depth}_{4.009A(1)} - \text{Depth}_{4.009A(2)}) * 0.100)$$

- (4)  $n^*$  for the linear property is the largest of the well status depths determined in 4.009A(3).

#### 4.010

#### **CHARACTERISTICS AND SPECIFICATIONS USED FOR DETERMINING ADDITIONAL DEPRECIATION (SCHEDULE D) FOR LINEAR PROPERTY PIPELINES AND WELLS**

- (a) For linear property described in 4.002(a) or 4.002(b), the following specifications and characteristics:

- (i) Pipe status
- (ii) From facility code, and
- (iii) From location

as of October 31 of the assessment year and as contained in the records of the AER or the RFI, are used to determine the schedule D factor, if applicable.

- (b) For linear property described in 4.002(c) or 4.002(d), the following specifications and characteristics:

- (i) Monthly oil production volume
- (ii) Monthly gas production volume
- (iii) Monthly condensate volume
- (iv) Monthly injection hours, and
- (v) Monthly production hours

as of October 31 of the assessment year and as contained in the records of the AER or the RFI are used to determine the schedule D factor, if applicable.

#### 4.011

#### **PROCESS FOR DETERMINING ADDITIONAL DEPRECIATION (SCHEDULE D) FOR LINEAR PROPERTY PIPELINES AND WELLS**

- (a) For linear property described in 4.002(a), the specifications and characteristics identified in 4.010(a) are used as described in Table 4.04.
- (b) For linear property described in 4.002(c) or 4.002(d):

- (i) Calculate the total production for the linear property, including all linear property well statuses, for the twelve months ending October 31 of the assessment year using the formula:

$$\text{Total Production} = \text{Oil production (m}^3\text{)} + \text{Condensate production (m}^3\text{)} +$$

(Gas production (Tm<sup>3</sup>) ÷ 0.9714)

\*\*Oil, condensate and gas production are as contained in the records of the AER or the RFI. No further conversion is required.

- (ii) Calculate the total injection and production hours for the linear property, including all linear property well statuses, for the twelve months ending October 31 of the assessment year.
- (iii) Refer to Table 4.09 to determine the table to be used to find Schedule D depreciation for the ACC determined in section 4.008.

#### **4.012 PROCESS FOR CALCULATING THE ASSESSMENT OF LINEAR PROPERTY DESCRIBED IN 4.002(A)**

The assessment of linear property pipelines described in 4.002(a) is calculated using the following process:

- a) Locate the ACC determined from section 4.006 in Table 4.03.
- b) Calculate the base cost using the prescribed Schedule A formula, rounded to the nearest \$1. The minimum base cost is \$1.
- c) Determine the Schedule B factor using the prescribed value in Table 1.01 as referred to in Table 4.03.
- d) Determine the Schedule C factor using the prescribed value in Table 4.03A as referred to in Table 4.03. The depreciation factors prescribed in Schedule C for linear property are exhaustive. No additional depreciation is allowed except as specified in Schedule D.
- e) Determine the Schedule D factor using the prescribed values in Table 4.03 and Table 4.04. The depreciation factors prescribed in Schedule D for linear property are exhaustive. No additional depreciation is allowed.
- f) Calculate the assessment of linear property pipelines by multiplying together the values of Schedules A, B, C, and D. The final assessment is rounded to the nearest \$10 except for a linear assessment value of \$0\*.

#### **4.013 PROCESS FOR CALCULATING THE ASSESSMENT OF LINEAR PROPERTY DESCRIBED IN 4.002(B)**

The assessment of linear property described in 4.002(b) is calculated using the following process:

- (a) Locate the ACC determined from section 4.006 in Table 4.03.
- (b) Calculate the base cost using the prescribed Schedule A formula, rounded to the nearest \$1. The minimum base cost is \$1.
- (c) Determine the Schedule B factor using the prescribed value in Table 1.01 as referred to in Table 4.03.
- (d) Determine the Schedule C factor using the prescribed value in Table 4.03A as referred to in Table 4.03. The depreciation factors prescribed in Schedule C for linear property are exhaustive. No additional depreciation is allowed except as specified in Schedule D.
- (e) Determine the Schedule D factor using the prescribed values in Table 4.03 and Table 4.04. The depreciation factors prescribed in Schedule D for linear property are exhaustive. No additional depreciation is allowed.
- (f) Calculate the assessment of linear property pipelines by multiplying together the values of Schedules A, B, C and D. The final assessment is rounded to the nearest \$10 except for a linear assessment value of \$0\*.

\* Applicable only where a Company or Assessed Person is listed on the AER Debtor Registry or AER Insolvency List with a Receivership or Bankruptcy status, and the linear property meets the criteria listed in Table 4.04, 4.10, 4.11, 4.12, or 4.13.

**4.014 PROCESS FOR CALCULATING THE ASSESSMENT OF LINEAR PROPERTY DESCRIBED IN 4.002(C) OR 4.002(D)**

The assessment of linear property wells described in 4.002(c) or 4.002(d) is calculated using the following process:

- (a) Locate the ACC determined from section 4.008 in Table 4.09.
- (b) Calculate base cost using the prescribed Schedule A formula, rounded to the nearest \$1. The minimum base cost is \$1.
- (c) Determine the Schedule B factor using the prescribed value in Table 1.01 as referred to in Table 4.09.
- (d) Determine the Schedule C factor using the prescribed value in Table 4.09A as referred to in Table 4.09. The depreciation factors prescribed in Schedule C for linear property are exhaustive except as specified in Schedule D.
- (e) Determine the Schedule D factor using the prescribed values in Table 4.09 as prescribed. The depreciation factors prescribed in Schedule D for linear property are exhaustive. No additional depreciation is allowed.
- (f) Determine which Zone the Municipality containing linear property wells described in 4.002(c) or 4.002(d) belongs to in Table 4.16.
- (g) Using the Zone and ACC determined, use Table 4.14 or 4.15 (whichever is applicable) to determine the Schedule L land factor.
- (h) Calculate the assessment of linear property wells by multiplying together the values of Schedules A, B, C and D, and add the Schedule L factor. The final assessment is rounded to the nearest \$10 except for a linear assessment value of \$0\*.

**4.015 PROCESS TO ASSESS PROPERTY DESCRIBED IN SECTION 284(1)(F.01)(IV) OR (V) OF THE MUNICIPAL GOVERNMENT ACT (MGA)**

The valuation standard for buildings that are part of the well referred to in the Regulation section 2(1)(m)(iv) must be assessed using the Valuation Guide for Special Purpose Properties copyrighted by the Alberta Assessors' Association in 1998, or the Alberta 2001 Metal Buildings Cost Manual, whichever is more applicable in the context.

**TABLE 4.01 PIPE MATERIAL EQUIVALENCY CHART FOR LINEAR PROPERTY DESCRIBED IN 4.002(A) OR 4.002(B)**

The following chart will be used to translate the AER or RFI pipe material code to the Minister's Guidelines pipe material code.

| AER or RFI Pipe Material (col1) | Code (col2) | Minister's Guidelines Pipe Material (col3) | Code (col4) |
|---------------------------------|-------------|--|-------------|
| Aluminum                        | A           | Aluminum                                   | A           |
| Poly Butylenes                  | B           | Polyethylene                               | P           |
| Cellulose Acetate               | C           | Polyethylene                               | P           |
| Fibreglass                      | F           | Fibreglass                                 | F           |
| Composite                       | G           | Steel                                      | S           |
| Asbestos Cement                 | H           | Polyethylene                               | P           |
| Cast Iron                       | N           | Steel                                      | S           |
| Polyethylene                    | P           | Polyethylene                               | P           |
| Non Certified                   | R           | Polyethylene                               | P           |
| Steel                           | S           | Steel                                      | S           |
| Unknown                         | U           | Polyethylene                               | P           |
| Polyvinyl chloride              | V           | Polyvinyl chloride                         | V           |

\* Applicable only where a Company or Assessed Person is listed on the AER Debtor Registry or AER Insolvency List with a Receivership or Bankruptcy status, and the linear property meets the criteria listed in Table 4.04, 4.10, 4.11, 4.12, or 4.13.

**TABLE 4.02 PROCESS FOR DETERMINING THE LINEAR PROPERTY UNIT EQUIVALENCY FOR MAXIMUM OPERATING PRESSURE OF LINEAR PROPERTY DESCRIBED IN 4.002(A) AND 4.002(B) FOR MATERIAL THAT EQUALS S**

| AER or RFI Maximum Operating Pressure (Col1) | Minister's Guidelines Pressure Code (Col2) |
|--|--|
| 0–1899 kPa                                   | P150                                       |
| 1900–4999 kPa                                | P300                                       |
| 5000–6629 kPa                                | P400                                       |
| 6630–9939 kPa                                | P600                                       |
| 9940 or greater kPa                          | P900                                       |

**TABLE 4.03 CALCULATION PROCESS FOR LINEAR PROPERTY DESCRIBED IN 4.002(A) OR 4.002(B)**

For ACC beginning with PL,  $x$  equals the outside diameter of the pipe in millimetres (mm).  $n^*$  equals the length of pipe in kilometres (km) as contained in the records of the AER, or, for pipeline not found in the records at the AER, as contained in the report requested by the assessor (RFI).

For ACC beginning with GDS  $n^*$  equals the number of customer hookups

| ACC          | ACC Description   | Schedule                              |            |             |            |            |

TABLE 4.04 SCHEDULE D FACTORS FOR LINEAR PROPERTY DESCRIBED IN 4.002(A) OR 4.002(B)

Schedule D is 1.000 unless Code D or Code RB applies.

| <b>Code</b> | <b>Description</b>  | <b>Schedule D Factor</b> |
|-------------|---|--------------------------|
| <b>D</b>    | Pipeline that has a discontinued status as contained in the records of the AER or the RFI.  | 0.100                    |
| <b>CFBS</b> | Pipeline with an operational status and a diameter greater than 246.2 mm as contained in the records of the AER that is within the boundaries of Canadian Forces Base Suffield as found on Plan 9411999, Block A only.                      | 0.950                    |
| <b>RB</b>   | Pipeline licenced to a Company or Assessed Person that is listed on the AER Debtor Registry or AER Insolvency List with a Receivership or Bankruptcy status, and the Company or Assessed Person's associated well linear assessment is \$0. | 0.000                    |

**TABLE 4.05 DETERMINING MINISTER'S GUIDELINES WELL STATUS DESCRIPTIONS FOR LINEAR PROPERTY DESCRIBED IN 4.002(C) OR 4.002(D)**

**Column 1:** AER Well Status is determined by combining well status fluid, well status mode, well status type and well status structure as contained in the records of the AER or the RFI.

**Column 2:** Provides the Minister's Guidelines well status description where the sum of oil and condensate production in the 12 months ending October 31 of the assessment year is greater than 0.

**Column 3:** Provides the Minister's Guidelines well status description where the sum of oil and condensate production is equal to 0 in the 12 months prior to October 31 of the assessment year and gas production in the 12 months ending October 31 of the assessment year is greater than 0.

**Column 4:** Provides the Minister's Guidelines well status description where the sum of oil and condensate production and gas production in the 12 months ending October 31 of the assessment year is equal to 0.

| Column 1<br>AER Well<br>Status | Column 2<br>Minister's Guidelines<br>Well status description | Column 3<br>Minister's Guidelines<br>Well status description | Column 4<br>Minister's Guidelines Well<br>status description |
|--------------------------------|--|--|--|
| 00000000                       | Crude Oil Flowing  | Gas  | Drilled and Cased  |

**TABLE 4.09 CALCULATION PROCESS FOR LINEAR PROPERTY DESCRIBED IN 4.002(C) OR 4.002(D)**

The process for determining  $n^*$  in Table 4.09 is described in section 4.009.

*For ACCs beginning WL  $n^*$  equals the depth in metres (m).*

For ACC WL10, WL20, WL30, WL40, WL50, WL60, WL80, WL90, WL100, WL110, WL120, WL230, WL240, WL250 if  $(n^*-304)$  is less than zero (0) then  $(n^*-304)$  equals zero (0).

| Schedule |  |  |            |             |            |            |                    |
|----------|--|--|------------|-------------|------------|------------|--------------------|

**TABLE 4.14 SCHEDULE L VALUE FOR WELLS ON A SINGLE PAD SITE**

Where there are three or less linear property wells on a surface site (as determined by a lease, licence or permit), that is less than 20 acres in size.

| Code      | Zone           | Single***<br>Schedule L Value (per well) |
|-----------|----------------|--|
| <b>5A</b> | <b>Central</b> | 12,792                                   |
| <b>5B</b> | <b>NE</b>      | 7,212                                    |
| <b>5C</b> | <b>NW</b>      | 5,298                                    |
| <b>5D</b> | <b>SE</b>      | 9,270                                    |
| <b>5E</b> | <b>SW</b>      | 8,079                                    |
| <b>5F</b> | <b>Other**</b> | 0  |

**TABLE 4.15 SCHEDULE L VALUE FOR WELLS ON A MULTI-WELL PAD SITE**

Where the well has an ACC of WL60 and/or where there are four or more linear property wells on a site (as determined by a lease, license or permit), that is less than 20 acres in size. The Multi-well Pad value may be applied for surface sites greater than 20 acres in size at the discretion of the Provincial Assessor.

| Code      | Zone           | Multi-Well***<br>Schedule L Value<br>(per well) |
|-----------|----------------|---|
| <b>6A</b> | <b>Central</b> | 4,264   |
| <b>6B</b> | <b>NE</b>      | 2,404   |
| <b>6C</b> | <b>NW</b>      | 1,766   |
| <b>6D</b> | <b>SE</b>      | 3,090   |
| <b>6E</b> | <b>SW</b>      | 2,693   |
| <b>6F</b> | <b>Other**</b> | 0   |

\* Applicable only where a Company or Assessed Person is listed on the AER Debtor Registry or AER Insolvency List with a Receivership or Bankruptcy status and the well has not produced for the twelve months ending October 31 of the assessment year.

\*\* Other is used when the well is located on an industrial site or non-residential parcel at the discretion of the provincial assessor.

\*\*\* Where there are four or more active wells on a surface site (as determined by a lease, license or permit), that is less than 20 acres in size, the Multi rate will apply; otherwise the Single rate will apply. The Multi rate may be applied for surface sites greater than 20 acres in size, at the discretion of the Provincial Assessor.

**NOTE:** Urban municipalities are assigned the zone for the rural municipality in which they are located, or in the case of Cities are within or adjacent to. Example, Devon is in Leduc County; Leduc County is in the Central zone. Where there is a discrepancy regarding the zone assigned to a municipality, the Provincial Assessor will assign the zone.
